

Green Solution Connections Rider (GSR)

Frequently Asked Questions

1. What is the GSR Program?

The Green Solution Connections Rider (GSR) is a **voluntary program** that allows eligible commercial and industrial customers to subscribe to **renewable energy attributes** from new Evergy-owned renewable resources. These resources are part of Evergy's Integrated Resource Plan and are **not needed for compliance** with renewable standards.

2. What are you subscribing to?

Customers can subscribe to renewable attributes from newly constructed Evergy resources. Evergy retires RECS on your behalf and you receive the environmental attributes.

3. How does subscription work?

- You will sign a **Participation Agreement** specifying:
- **Term lengths:**
 - » 10-year agreement (Resource B)
 - » 15-year agreement (Resource A)
- Terms correspond to the renewable resource the customer is allocated to within the GSR program phase.
- **Subscription level:** Customers can subscribe 1%-100% of annual usage in single percentage increments, aligned with estimated annual generation of the selected renewable asset.

4. How is pricing determined?

- Pricing is based on the **Green Solution Rate (GR)**, expressed in:
 - » **10-year agreement:** \$10.33/MWh
 - » **15-year agreement:** \$9.32/MWh
- The monthly **Green Solution Charge (GC)** =
Metered Production × Customer's Allocation Factor × GR for the applicable year.
The GR is a fixed \$/MWh rate that varies by term length and program phase

5. How will you be charged?

GSR charges are invoiced **off-bill**, via a separate commercial invoice — keeping energy charges and renewable attribute charges separate.

6. Can I change or cancel my subscription?

- Transfers to other eligible accounts or customers may be allowed under the Participation Agreement.
- Early termination may result in **termination fees** equal to the remaining Green Solution Charges for the term.

7. What if Evergy cannot supply enough renewable attributes?

If renewable generation is insufficient, Evergy will **pro-rate allocations** and adjust charges accordingly.

8. What are the benefits of joining GSR?

- **Long-term price certainty** for renewable attributes.
- Supports **corporate sustainability goals** and greenhouse gas reduction initiatives.
- RECs are retired on your behalf, simplifying compliance and reporting.
- Promotes **local renewable development** and economic growth.

Next Steps:

1. Discuss your energy and sustainability goals with your Evergy Customer Solution Manager or Evergy Renewables Team.
2. Select the program that best supports your goals.
3. Choose your subscription percentage and term.
4. Evergy procures or allocates energy attributes and retires credits annually.
5. See your renewable or carbon-free energy impact reflected in sustainability reporting.

Ready to Get Started?

Our Customer Solutions team can help match your business with the right sustainability program.
